

## Extraction, Bone Graft and Single tooth Implant Example

The upper right central incisor has a hopeless prognosis. Tooth #8 will be extracted (D7140 – extraction) and replaced with a single tooth implant (D6010 – endosteal implant). At the time of the extraction, D7953 - bone replacement graft for ridge preservation to preserve the ridge integrity, will be placed. A cone beam CT (D0366 – cone beam CT capture and interpretation with field of view of one full dental arch – maxilla, with or without cranium) will be taken. Since D7953 is done on the date of the extraction in anticipation of future implant placement, no date for the implant should be noted. The claim also serves as a request for predetermination of benefits for that procedure and indicates to the carrier that an implant replacement is planned.

The ICD-9 diagnosis codes to use for this claim are:

- 523.31 – aggressive periodontitis, localized
- 525.12 – loss of teeth due to periodontal disease
- 525.51 – partial edentulism, class I
- 525.25 – moderate atrophy of the maxilla
